

HEAT INDEX REFERENCE CHART

The Heat Index combines air temperature and relative humidity to reflect what the temperature actually feels like to the human body. Use this chart to assess risk level in interior work zones based on measured temperature and humidity readings.

Note: radiant heat from surfaces (concrete, metal decking, glass) can add an additional 10-15°F to the effective Heat Index.

Heat Index (°F)	Risk Level	Required Response	CDRP Frequency	Buddy System	High-Heat Protocol
Below 91°F	CAUTION	Monitor, Hydrate	Every 2 Hours	Encouraged	No
91-103°F	MODERATE	Increased hydration, CDRPs	Every 2 Hours	Encouraged	No
103-115°F	HIGH	High-heat Procedures active	Every 1 Hour	MANDATORY	YES
115-129°F	VERY HIGH	Reduce strenuous tasks; shorten shifts	Every 30-45 Minutes	MANDATORY	YES
130°F +	EXTREME	Suspend work GC/Superintendent	Continuous Cooling	MANDATORY	YES

Note: The chart above addresses interior ambient temperatures. For outdoor delivery/staging areas, apply same thresholds to outdoor heat index readings obtained from weather services or onsite measurement.
