

HEAT INDEX REFERENCE CHART

The Heat Index combines air temperature and relative humidity to estimate how hot it actually feels to the human body. Source: National Weather Service (weather.gov). Values shown are apparent temperatures in degrees Fahrenheit. In direct sun, add approximately 15°F. This chart is intended for use with the OSHA-NIOSH Heat Safety Tool app, the OSHA Heat Index Calculator, and the OSHA Outdoor WBGT Calculator referenced throughout this plan.

HEAT INDEX (APPARENT TEMPERATURE, °F)

Temp	RH 40%	RH 50%	RH 60%	RH 70%	RH 80%	RH 90%
80°F	80	81	82	85	86	88
84°F	83	85	88	90	94	98
88°F	88	91	95	100	106	113
92°F	94	99	105	112	121	131
96°F	101	108	116	126	138	—
100°F	109	118	129	142	—	—
104°F	119	131	145	—	—	—
108°F	130	146	—	—	—	—

RISK LEVEL LEGEND

CAUTION (<91°F H.I.)	- Fatigue possible - Standard Hydration - Provide Water - Encourage Rest Breaks
MODERATE (91 – 103°F H.I.)	- Heat Stroke, Exhaustion & Cramps Possible with Prolonged Exposure - Heat Priority Day Procedures Active - Mandatory Buddy System - Rest Every Hour
HIGH (103 – 115°F H.I.)	- Heat Stroke & Exhaustion Likely - Limit Outdoor Exposure - Observation Checks Every 30 Minutes - Rest Every 45 Minutes
EXTREME (>115°F H.I.)	- Heat Stroke Imminent - Suspend Non-Essential Outdoor Work - Minimize Exposure - Emergency Action Plan Ready

Note: Per Nevada OSHA's May 4th, 2022 guidance under the Heat Illness National Emphasis Program, any day on which the temperature reaches or exceeds 90°F is treated as a Heat Priority Day, regardless of humidity.
