

TOOLBOX TALK — WEEKLY SAFETY MEETING

Millwork | Carpentry | Interior Finishes | Material Handling

WEEK 47

Date: Supervisor:

Project / Job Name:

TOPIC: Toolbox Talk Purpose & Participation

OVERVIEW:

Toolbox talks are brief, focused safety conversations held at the start of the work period to communicate hazard information, share lessons learned, and engage the crew in safety thinking before work begins. They are most effective when they are genuinely two-directional — not a supervisor reading

TALKING POINTS — Read to Crew:

1. Toolbox talks are a legal requirement under OSHA's safety program standards and serve as a documented record of safety training. Your signature on the sign-in sheet is your acknowledgment that you received the information in the talk. In the event of an injury or regulatory inspection, these records demonstrate that the crew was briefed on relevant hazards. The records must be
2. The most valuable toolbox talk is one where the crew speaks as much as the supervisor. You work the job every day. You see hazards that a supervisor walking through for 10 minutes does not see. You know which procedures are being followed consistently and which ones are being shortcut under time pressure. When you raise a hazard during a toolbox talk, you are doing safety work that cannot be
3. If you missed a toolbox talk — whether due to starting late, being on a different part of the site, or any other reason — you are responsible for speaking with your supervisor before beginning work to receive the information from that talk. Toolbox talks are not optional attendance events. The information covered is relevant to your safety that day, and missing it leaves you less prepared
4. Effective toolbox talks focus on real hazards that are actually present on the current job, not generic safety topics read from a binder. The best topics come from the work being done that week, near misses or incidents that occurred recently, and hazards that have been observed or reported by the crew. If you have a topic you think should be covered, raise it with your supervisor — your

DISCUSSION QUESTIONS — Ask Your Crew:

- Q1: What safety topic would you most like to cover in an upcoming toolbox talk based on what you have seen on this job?
Q2: Is there anything happening on this site right now that makes you uncomfortable from a safety standpoint?

KEY SAFETY POINTS:

- You are always encouraged to raise hazards during every toolbox talk
- If you missed the topic this week, speak with your supervisor before starting
- Sign-in is required — it documents that you received this safety briefing
- Your questions may save a coworker from a serious injury — ask them out loud
- Toolbox talks are a legal record and may be reviewed if an incident occurs

Crew sign-in sheet on page 2 — all 30 crew members sign on the following page.

CREW SIGN-IN SHEET

WEEK 47

By signing, I confirm I attended this toolbox talk and understand the topic discussed.
