

TOOLBOX TALK — WEEKLY SAFETY MEETING

Millwork | Carpentry | Interior Finishes | Material Handling

WEEK 48

Date: Supervisor:

Project / Job Name:

TOPIC: Incident Reporting Procedures

OVERVIEW:

Incident reporting is one of the most important safety processes on any job site, and it is also one of the most underutilized. Workers frequently do not report injuries because they believe the injury is minor, because they worry about their job, or because they do not know the process. All three of these

TALKING POINTS — Read to Crew:

1. Every injury — regardless of perceived severity — must be reported to your supervisor before leaving the job site on the day it occurs. This is not bureaucracy. It is protection for you. Minor injuries that go unreported can become serious medical issues: a cut that gets infected, a strain that worsens, a chemical exposure with delayed effects. If an unreported injury becomes serious
2. Workers' compensation laws protect your right to report injuries and access medical care. Under federal law and the laws of every state, an employer cannot legally retaliate against a worker for reporting a work-related injury. If you report an injury and experience any negative job consequence as a result, that is illegal retaliation and should be reported to OSHA. You have legal
3. After an injury or serious near miss, do not disturb the scene until your supervisor has assessed it and authorized resumption of work. Evidence of what caused the incident may be critical for the investigation, for workers' compensation purposes, and for preventing a recurrence. Take photos with your phone if possible, note the exact time and what you were doing, and identify any
4. The goal of incident investigation is to find and fix the underlying cause so the same thing does not happen again — not to assign blame. A good incident investigation asks what system, procedure, or condition failed, not who made a mistake. Incidents happen because of multiple contributing factors. Fixing the system prevents future incidents. Blaming individuals does not.

DISCUSSION QUESTIONS — Ask Your Crew:

Q1: What is our exact incident reporting procedure on this project — who do you call, what form do you fill out?

Q2: Has anyone ever not reported an injury because they were worried about consequences? How did that play out?

KEY SAFETY POINTS:

- Report ALL injuries, no matter how minor, to your supervisor immediately
- Seek first aid for any cut, burn, or strain — do not try to tough it out
- Do not alter the scene of any serious incident until investigation is complete
- Workers' Compensation coverage applies — you cannot be fired for reporting
- Document the incident with photos and written notes as soon as possible

Crew sign-in sheet on page 2 — all 30 crew members sign on the following page.
